

Sanatana Community Platform

Charter and build record for a community-stewarded temple surface — reference community: Austin Hindu Temple & Community Center, Austin, Texas. Document EgD-SCP-001.

1 Purpose

This repository gives a temple community a public record it owns outright. It mirrors the community's own published facts into a fast, login-free page set held as plain text under version control, so the record can be cloned, forked, corrected and carried to any host without asking a platform for permission. It is the [PAIX Parish Platform](#) machine — one repository, one dictionary entry per congregation, one build — pointed at a Hindu temple community and written in that community's own vocabulary rather than in borrowed structure.

2 Steward and standing

Steward: Prasad, FICO practitioner, formerly on the Epiq Systems programme. This is the seed of his own GitHub-backed record: a working surface for engaging local non-profit entities and the base layer of a community and personal digital twin. His son is the first reader of the education ladder, which is why that ladder is written to be read by a child without an adult narrating it.

Platform pattern, stylesheet and operating canon: Donat Omer Thériault, EVEglyphDesign. The community owns its content; EVEglyphDesign owns only the pattern.

3 Surfaces delivered

Surface	What it carries	Address
Portal	Community cards, the argument for a repository over a website builder, and the two-minute instruction for adding a second community.	portal
Austin Hindu Temple	Address, hours, mission, governance, recurring observances and the last published class roster — each traced to a temple-published source.	temple page
Education ladder	Five age bands, four to eighteen, each with a stated aim and four units.	ladder
Digital twin	What the twin records, what it refuses to record, and how consent works in practice.	twin
Provenance	Every fact with its source, its handling and its confirmation status.	provenance

4 The education ladder

Five bands. Each states its aim in one sentence and carries four units, so a parent reads a whole year in under a minute and a child sees where they are going.

Band	Aim
Ages 4–6 · Shishu	Recognition and rhythm — the child learns that this is their place.
Ages 7–9 · Bala	Narrative — the child can retell a story and say what it asks of them.
Ages 10–12 · Kishora	Structure — the child can explain what Hindus do, and why, to a friend who is not Hindu.
Ages 13–15 · Yuva	Argument — the teenager holds their ground without contempt for anyone else's.
Ages 16–18 · Taruna	Stewardship — the young adult can run something and account for it.

Design rules

- Sanskrit terms are glossed in plain English on first use, never left untranslated.
- Stories keep their mischief. Krishna is not sanitised into a lesson plan.
- Nothing is taught by contempt for another tradition; comparative respect is its own unit.
- Every band ends in something the child does, not something the child has been told.
- Standing comes from a weekly seva entry — evidenced help — not from attendance or scores.

The ladder does not replace the temple's own Balagokulam, Bhajans, Tamil and Samskritam classes. It is the written spine a parent holds against those classes to see what a child has covered and to fill the gaps in the weeks the family cannot make the drive to Decker Lake Road.

5 Consent and refusal

The twin records the institution, the calendar, the education ladder per cohort, service in aggregate, and its own provenance. It refuses the following, by design and not by oversight:

- Children's names, photographs, ages or schools without written parental consent held in the repository.
- Attendance used as a compliance instrument — a family that misses a term owes no explanation to a file.
- Donation amounts against named individuals.
- Trackers, advertisements, analytics beacons and third-party scripts of any kind.
- Anything a member cannot have removed, visibly, in the commit history.

Consent names the layer and the reader; 'yes to the class roster, no to photographs' is a valid and recorded answer. Withdrawal is one request and takes effect in the next commit — no form, no committee. Where a feature would improve the record but reduce community safety, the feature

loses.

6 Sourcing discipline

Address, telephone, general enquiry address, mission, governance and recurring observances are drawn from the temple's own pages and its own hosted documents, including the AHTCC bylaws revision 4.0.1 of 29 October 2017 and a temple-issued panchang. The class roster comes from an undated temple education page and is published here as a starting point for confirmation, with teacher names withheld pending consent. Opening hours differ between two temple pages and are flagged as a source conflict for the temple to settle. Deities and shrines, board and trustee names, and the current festival calendar are left blank and marked open, because no reachable source settles them and a plausible guess in a religious record is a worse outcome than a gap.

The temple's site disallows automated reading at its root; facts were taken from its individually published pages reached through search, each fetched once. Nothing in this document was generated from a model's recollection of the temple.

7 Next actions for the steward

- Walk the temple page with the temple office and settle the four open fields.
- Collect written consent for any named person or photograph before the first named entry.
- Read the ladder with your son and mark the band he is actually in; log corrections in [the repository](#).
- Introduce the surface to one local non-profit entity as a worked example, not as a pitch.
- Copy the COMMUNITIES entry to add a second community; the portal card generates itself.
